Narcissus, in good top-soil, well drained, bloom a generation or more without care. Our special naturalizing mixture of over 20 varieties is ideal! Rounds, top-size, at \$8.00 per 100 (500 or more at 7c).

VARIETIES

Every single kind offered on these pages is suitable throughout Northeast America, as far north as hardy. Hardiness indicated by Zone Number—see also Page 14.

5-in-1 APPLE

All on one tree. Golden Delicious, Red Delicious, Rome Beauty, Yellow Transparent, Stayman's Winesap. 5 ft. \$3.15.

KELSEY NURSERY SERVICE

50 Church Street, New York 7, N. Y.

FRUITS and NUTS for AUTUMN

All can be planted in Oct.-Nov., almost a year gained over next Spring and identical success. A sod mulch helps. Plant according to hints on Page 14 for deciduous trees and shrubs. Specimens should be staked. Sweet Cherries are an exception: Risk is increased 5% to 10%.

SELF-STERILITY OF FRUITS

Many fruits do not bear real crops if planted separately. Pollen from nearby trees of different variety is often needed.

Noted on these pages by:

● = self-unfruitful. Do not plant by itself, but always with another variety of the same fruit to cross-pollinize.

(P) = good pollinizer.

Dwarf Fruits Bear Young

Standard Fruit Trees

We maintain scrupulous care in identity, selection and packing.

NOTE: 5 assorted is minimum order at these prices. 4 or less can be ordered, but there will be \$1.00 handling charge.

Dwarfed Fruit Trees

A tree whose fruit is as large or larger than ordinary, but which never grows very tall—perhaps ultimately 12 to 15 feet. Space 12 feet apart.

A dwarfed tree can be sprayed, pruned and picked by hand without ladders, equipment or professional skill. Tree bears much earlier in life, in its third or fourth year at latest—often earlier—and carries amazing loads of fruit. Dwarfed fruits (especially Plums and Peach) are less liable to borers and other pests.

PRICES: All kinds listed below:

1 year—Not branched.....	\$2.60	Add 50c. } packing on orders under \$10. }
2 year—Branched.....	3.90	
3 year—Heavier.....	5.25	

All three ages are about the same height. Most are 3 to 4 feet high, but apples often are still dwarfer.

Kinds of Dwarfs Available

Root Stocks: Apples on Malling types: certain kinds on 1, 2, 3 or 7 for reasons based on long experience.

Also, apples are available on Malling 9—Extra Dwarf, not over 6 ft. Specify if No. 9 desired.

Pears are on Quince; Plums on St. Julien; other fruits on Almond.

HUGE HYBRID BLUEBERRIES

Really beautiful as specimens or in hedges. A 100-foot hedge will pay about \$25 worth of berries a year! (Spaced 18 inches.)

Why Wait? Plant Some NOW!

And enjoy the berries sooner. Not only will they add beauty to your garden but each bush will pay for itself many times over! Hardy throughout U.S.A. Blueberries do fully as well with fall planting as with spring

Needs Only an Acid Soil

Blueberries require an acid soil containing peat or other rotted vegetable matter. They need a moderate supply of soil-moisture, and good drainage so that the roots can get air during the growing season.

Cabot. Early, broad spreading bush. Home use.

Concord. Hardy, upright, midseason. Fine quality. Large.

Jersey. Latest and largest berry. Hardest.

June. Erect bush. Earliest, dark blue berries.

Rancocas. Early, good quality.

Rubel. Late. Tallest, most erect.

Burlington. Newest named kind. Later than all others. Good shipper. Large. Good quality.

Mixed Kinds. (Our selection, but good pollinizers.) 10 plants, 18 to 24 inch, for \$10. (Or 2 to 3 ft. for \$13.)

Set the plants in beds 4 feet apart each way. Several varieties should be included in every planting, as an exchange of pollen is necessary to produce good crops of berries. Or order "mixed" if you wish—we will assort for good pollenization. **All varieties are almost equally fine.**

BULBS FOR AUTUMN

We have concentrated on the few best kinds of each class now in quantity production. About 90% of the total different effects of a thousand confusing names are covered. The result is easy, intelligent selection by you and—lower prices, for top size bulbs.

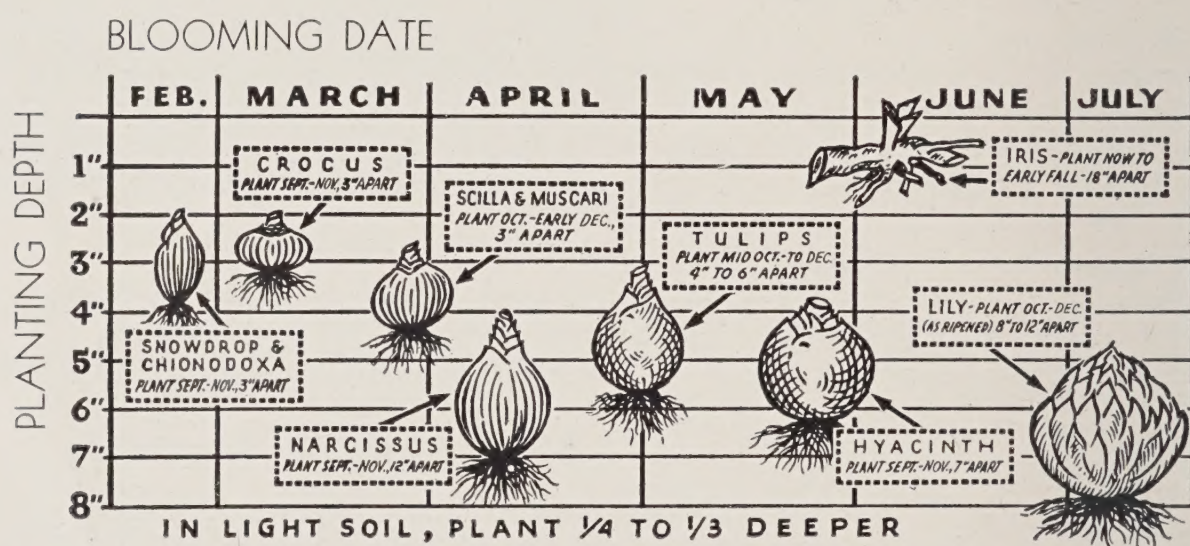

The bulbs offered are specially selected for you in Holland. No finer quality exists—no finer varieties—anywhere at any price.

Bulb prices depend on how the crop happens to grow in any given year.

PLANTING

Some fine varieties grow well one year (low price) and poorly another (high price).

It is our service to our customers to watch these variations and to give you each year the greatest value for your money. We ask that if possible you order three weeks in advance of your desired planting date—in fact, it is best to order at once on receipt of this catalog. Some kinds will be short.

BULBS FOR NATURALIZING

It is not generally realized how many kinds of bulbs may be permanently planted, giving a yearly show of bloom. There are two kinds of bulbs—those which last 5 to 7 years (like tulips), and those which are permanent, sending up a flower every season from the same bulb for a lifetime (Narcissus, Scilla, Muscari, Crocus, Hyacinths).

Naturalizing Narcissus

Narcissus are the showiest of the really satisfactory naturalizing bulbs. It might be said that the best place to plant these is not in the garden at all—but scattered among shrubbery, under fences and wherever a drift of April show is desired. Not all kinds do equally well when naturalized, and we have selected a special assortment for this purpose which we list below:

Dig the planting area well with fertilizer and humus. Then plant the bulbs each on a sand cushion.

Order Tulips Now!

This Year's Choicest Kinds—at Lowest Prices!

Once again we offer Holland-grown tulip bulbs. In no other bulbs, perhaps, is origin of stock so important. The tulip is a cold weather plant and the cool summers and mild winters of Holland suit its propagation to perfection. America has, true, made strides in growing tulips during the war, but we have nowhere a "Tulip Climate." The usual top-size for American-grown tulips is 10 to 11 cm. whereas in Holland it is 12 to 13 cm. Anyone who knows tulips realizes that that difference in bulb can often double the size of the flower next spring. The larger bulb costs you no more—often less!

2 ft. July to October. Space 10 inches, sun, drained, fertilized. Any one kind—3 for \$1.25; 12 for \$4.25.

Chas. H. Curtis. Sunset-red. Late.

Mary Louise. The best and biggest white to date. Florets twice as big as any other white. Medium height.

Ruby Lee. Extra large plum-red flowers. Healthy vigorous growth; medium height.

Salmon Beauty (Eva Forster). Rich salmon-pink with white eye. Beautiful.

EARLY PHLOX (Suffruticosa)

Miss Lingard. The best early white known. June to October.

Rosalinda. Pink form.

Gypsophylla

Rosy Veil. An early, compact dwarf Baby's Breath. Pink and white. 3 for \$1.25; 12 for \$4.25.

Astilbe Fanal

The name means "lighthouse" and the blazing, fiery spikes brighten any garden. May-June, 15 inches high. Space 12 inches. Rich, humus, sun or semi-shade. 3 for \$2.00; 6 for \$3.75.

Frikarti Aster

Wonder of Staefa. The finest garden plant introduced in the last 20 years. Mass of flowers June 1 to mid-November. Sun or light shade. Ht. 30 in., space 15 inches. Lavender blue, branching, to 2½ ft. 3 for \$1.50.

White Plaintain-Lily

Subcordata grandiflora. The well-known white August-Lily. 3 for \$2.00; 6 for \$3.75.

Shrubs, Trees, Evergreens for Fall

On the next 14 pages are the choicest of these woody plants in sizes suitable for autumn planting. It is an enormous help to a plant (gains nearly a year's growth) to be in the ground all winter ready for an EARLY spring start—easy to do by watching a few simple rules.

1. New plantings need watering for autumn root-growth. Water freely up until ground freezes.

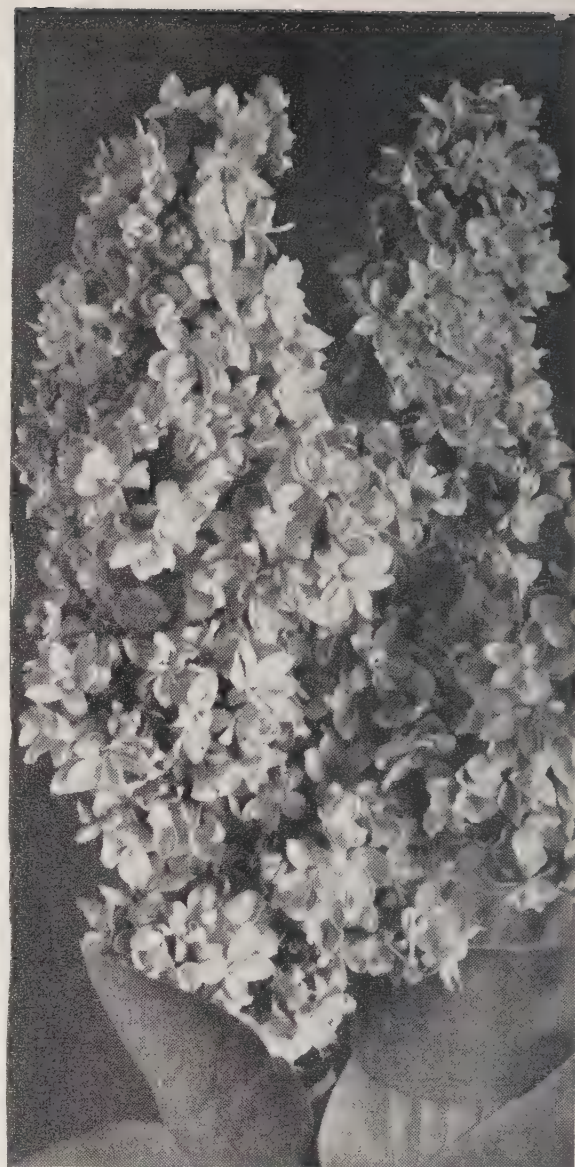

2. Time of planting is important: Evergreen trees and shrubs best from August to early October (they need late Fall for root-growth)—deciduous trees and shrubs from October to frost—(after leaves turn color).

3. A very few plants are best moved only in Spring when sap is running. Fall planting of these can be done:—(a) By digging with an earth ball. (b) by using small sizes only. (Birch and Magnolia are typical of this small group.)

4. VERY small evergreen seedlings are likely to frost-heave. Easily overcome—Simply strew a thin mulch of salt hay or light straw in the beds.

CLIMATE MAP

The numbers I to VII in the map refer to Zone numbers printed after each plant name. It shows the northern limit beyond which any given plant cannot grow. East of Indianapolis, a damper climate makes all evergreens hardier. West of Indianapolis hot western summers make deciduous trees hardier than rated.

DECIDUOUS SHRUBS

Move safely and easily after dormant (Oct. to Dec.). Need no attention but watering and pruning back. Save almost a year's growth by fall planting.

BARGAINS In Young Trees

All the kinds below in the special sizes offered will succeed fully as well planted in Oct.-Dec. as in spring and they will grow 50% better next summer! Only exceptions are the Birch and Beech, which add perhaps 10% to transplanting risk by fall planting in sizes offered. No special treatment needed.

Plan Ahead—Plant Now
Young trees require little care, less expense and less trouble to plant than large. Order NOW the trees you need in the future.

EVERGREENS IN FALL

All are easily planted in September and October—the Yew is particularly easy even in small sizes. No fertilizer until next spring, but water well once a week to freeze-up and mulch smaller sizes unless already in shady locations.

Pyramidalis (The Pyramidal Yew). Fast growing new kind, vertical branches, black - green needles. Probably 15 ft. high.

Pilaris Grandiflora (Bigleaf Yew). Nearly similar in shape and growth, but the needles are enormous, almost as large as Sciadopitys. The effect is rich and unusual. Small pot size only.

Robusta (Obelisk Yew). Even faster growth, probably to over 20 ft. Otherwise the same.

Stricta (Narrowbush Yew). Needles short giving a compact effect. Vertical shape, dwarf, narrow shape. Probable height 6 to 8 feet.

Stricta Viridis (Grassgreen Yew). Similar to stricta, except the needles, which are gray, bright green all winter.

Sentinalis (Sentinel Yew). Extraordinarily narrow, but well-clothed with needles. Probably to 15 ft. We have only the small pot size this year.

TAXUS CUSPIDATA (Japanese Yew)

For any and every purpose in which Evergreens are required this Yew can be recommended. Perfectly hardy in New England and Ontario, immune from most diseases and pests. Accommodating to an extraordinary degree, withstanding shade or full sunshine. Dark green at all seasons of the year. This plant has been acclaimed "Asia's greatest gift to the gardens of America."

Azaleas for Fall Planting—Write for prices on varieties not listed. Smallest sizes need winter protection if fall planted, B&B sizes do not.

GABLE'S HYBRID AZALEAS

These hybrids have been made in the effort to originate a hardier strain of the Japanese type of Azalea in better form and color. All have lived and flowered in the open field where they have withstood temperatures of twenty below zero and more in the last few winters with only negligible injury.

●BOUDOIR. 3 ft., dense, broad. Foliage hid under large blooms, watermelon pink. Semi-evergreen.

CAMEO. Tea-pink, late, double semi-evergreen. Long season.

CLARET. Early, large, wine-red. Dwarf semi-evergreen. Profuse.

CORSAGE. Dwarf, semi-evergreen; light orchid, showy blooms.

ELIZABETH GABLE. Late, rosy orchid. Best evergreen foliage of all.

FRINGED BEAUTY. 5 ft. Deciduous. Late, dark red, with fringe.

●HERBERT. 4 ft. Shapely, showy magenta-red. Semi-evergreen.

●MILDRED MAE. 3 ft. Early lavender, red spots. Evergreen.

OLD FAITHFUL. 6 ft. Dependable, early orchid. Vigorous. Deciduous.

ROSE BUD. Very double, pearly pink, just like a little rose.

●ROYALTY. Rich bright purple. Dwarf evergreen. Mid-season.

●SPRINGTIME. Early bright clear pink. Profuse, showy. Deciduous.

SIZE 2: AS SMALL A PLANT AS LOOKS SHAPELY.
12 to 15 in. B&B Clumps, 4 to 6 Stems.

Easy to Plant and Care for

Most people are surprised at the speed and ease of planting. Size 1 holes need a trowel only, 3 in. deep. Even Size 3 holes take but few good shovels full. Soak heavily after planting—and every 3 days for a month. Mulch heavily with old leaves.

These might be called “Junior Specimens.” The ball weighs about 5 pounds per plant, individually burlapped. They are 2 years older than Size 1. Express runs about 20 cents per plant. You can expect some blooms the year after planting. These really “look like something” the day they are planted.

This special “Young Aristocrat” grade measures 12 to 15 inches with a small ball, weighing one or two pounds only. This stock is not to be compared for a minute with **ordinary** collected plants. It is on the contrary all carefully dug, the greatest pains being taken to preserve the roots. Carefully packed, it is easily planted and makes a quick start. Shipped from North Carolina, yet express runs only about 8c each (in 100 lots).

LIVING WALLS

Cost depends almost entirely upon the size of plant used—never plant an inferior **kind** of hedge, rather plant small and wait an extra year.

The 15-18 in. plants at left grew into the hedge above.

The Story of a Yew Hedge

The photos tell it: The 15-18 inch plants at the left were set 1½ feet apart in rich, drained soil. The first three years the faces of the hedge only were clipped, so that the fourth year the side branches touched and the tops were 4 feet high. It was then cut down to 3 feet.

One year later the hedge was solid everywhere, a handsome part of the garden. Each June thereafter the top and sides were pruned, letting an inch or two of new growth stay on. (You have to let a hedge keep growing a little every year.) The large photo was taken in its eighth year, a perfect hedge nearly 4 feet high.

No other plant than the Upright Yew is so trouble-free and handsome a hedge. You can start this fall with exactly the same bushy pruned, twice-transplanted little trees. No better can be grown—outstanding bargains:

Ground Covers

Prevent Erosion on Steep Banks

Steep slopes can be put into grass and mowed. But it is constant work and worry. The following plants do the job better. There are almost no maintenance problems. Four are inclined to get out of hand: Hedera, Lonicera, Rose and Vinca. They can, however, be rigorously pruned without the least harm.

PACHYSANDRA Makes a 6-inch carpet.

A HONEYSUCKLE bank scents the air for a hundred yards around.

VINCA (The Myrtle)

The most satisfactory, showy, trouble-free of all ground covers. The leaf is small, shiny, dark green all year round. Even in full shade, the leaves grow thickly. It spreads by underground roots. To be sure of coverage within (say) 2 years, we recommend spacing 18 in. apart. There are blue flowers, showy and cheerful, all spring long and the plant will grow and thrive in any soil including barren sand or clay banks. **Planting**—Clumps come tied compactly. Untie and spread out when planting.

Ground Cover Specials

Eventually one plant will cover a large area, but on banks it is important to get the soil held quickly. We suggest bad steeps be planted 18 inches apart each way—gentler slopes 2 feet, except as noted below:

PACHYSANDRA terminalis

Tolerant in poor soil and shade. Set 3 to each sq. ft.

THE YEAR AFTER PLANTING

These little White Pines were about 1½ feet high, twice transplanted, and cost about 30c each.

TWENTY YEARS LATER

Photo near the same place shows trees 25 to 30 feet high. Worth \$50.00 or more each!

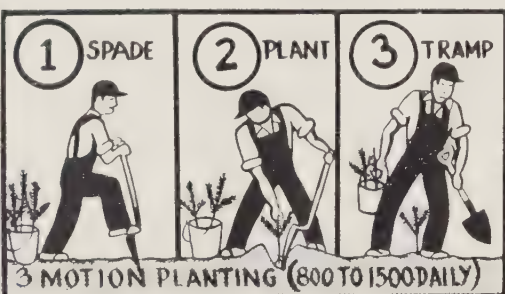

Young Trees

An empty acre produces nothing but taxes.
An acre of trees is beauty and profit, both.

BROWNELL SUB-ZERO ROSES

\$1.75 each (any 3 for \$5.00)

The results of more than a decade of research, this new race of roses adds to unusual hardiness a character of improving with age, rather than slowly deteriorating as most hybrid teas do. They are exceptionally easy to grow and bring into bloom. Disease-resistant.

HARDINESS: About Zone IV, but roots will survive still colder climates and even if tops damaged, new growth will be ready to bloom by rose time. Tops protected by hilling or burlap seldom kill back. Any plant that fails to bloom in 2 years will be replaced free anywhere in U. S. A.

6 Best Brownell Hybrid Teas

Blooms all summer long on hardier, longer-lived bushes.

Pink Princess. Bud red, flower deep pink. Free from premature defoliation. Blooms all summer.

Shades of Autumn. Showy red and yellow beauty.

V for Victory. Large, double, yellow, fragrant, constantly blooming.

Lily Pons. White, large. Vigorous, free bloomer.

Red Duchess. Robust, sturdy large red. Outstanding fragrance. Grand new rose.

Velvetier. Velvety, deep, dark red. Semi-double. Sometimes in clusters.

4 Brownell Floribundas

Everblooming, hardy, bushy clumps.

Tomkins Red. Semi-double, velvet red all summer.

Anne Vanderbilt. Exquisite coppery orange, informal, semi-double, brilliant, fragrant. All summer.

Curly Pink. Clusters of large two-toned pink all summer. Vigor, health and constancy. New.

PK 25. Very double, pure yellow. Up to 100 blooms on a plant.

4 Brownell Creepers

For ground cover, on walls, on fences.

Coral Creeper. All the shades of ocean coral complementing other delightful rose tints. (June).

Little Compton Creeper. Deep rose-pink. Single flowers in clusters.

Creeping Everbloom. Light crimson, double. The first all-summer creeper.

Magic Carpet. Large, double blooms, yellow and orange tones.

5 Brownell Climbers

Vigorous, extra hardy, vivid. Note two everblooming.

Elegance. Very large, perfect bloom. White with shaded yellow center. Grand show.

Golden Climber (Mrs. A. C. James). Best yellow climber. Fragrant. Ideal for cutting.

Copper Glow. Deep coppery orange. Delightful spicy fragrance. Sensational color.

Special-Priced Roses

(sold singly, only)

Climbing Break O'Day. Vigorous, everblooming apricot. \$2.00 each.

Orange Everglow. Constant copper-orange blooms. Fragrant, vigorous. \$2.00 each.

ORDER FORM ON REVERSE

Our Short Guide is published in March. This Fall catalogue omits many trees and shrubs, etc., which we have available. Write for price on anything you don't see.

Note on Fall Planting:

Even though they are not growing, you must WATER once a week all fall-planted trees, shrubs and plants.

WHY USE CLAY POTS?

Ferto-Pots are manufactured from a rich rotted cow manure mixture in automatic pot machines and then kiln-dried. The pots soften up in the moist soil and place the plant food where it is readily available to the roots of the growing plants. (No chemical fertilizers whatsoever are used in the manufacture of **Ferto-Pots**; they are entirely organic.)

Start your seeds, seedling plants, cuttings, bulbs, etc., in **Ferto-Pots** and insure quicker, better results; no wilt, no setback in transplanting; larger profits in catching the early market; less plant loss. Pot and all goes into the ground without disturbance or shock to the root system and continues to feed the growing plant.
